Document: Image Testing Suite

Date:

Version: 1.0

Image and Logo Testing Overview

This document demonstrates various image and logo placement scenarios in PDF generation. It includes placeholders for different types of visual content that would typically be included in business documents.

Testing Instructions

To test with actual images, place image files in the `test-scenarios/images/` directory and upload them as assets when making the API request:

```
curl -X POST http://localhost:8081/api/v1.0/print \ -F
'htmlFile=@5-images-logo.html' \ -F
'assets=@images/logo.png' \ -F 'assets=@images/chart.jpg'
\ -F 'assets=@images/product.png' \ -F 'jsEnable=false' \
--output images-test.pdf
```

Note: The CSS processor will remove any `background-image: url()` references to prevent `FileNotFoundException`. Images should be embedded directly in HTML or handled through the assets system.

Logo Placement Examples

Primary Logo

Main company logo for headers and official documents

Icon Logo

Square Format

80x80px

Icon Version

Compact logo for small spaces and favicons

Horizontal Logo

Wide Format

300x100px

Horizontal Layout

Extended logo for letterheads and banners

Charts and Diagrams

Sales Performance Chart

This chart would typically display quarterly sales performance with comparative data from previous years.
